Cupping Therapy - Dr Douglas Rebica - 2021-04-15
Cupping therapy delivers healing effects by improving blood circulation, promoting smoother flow of qi through meridians, and dispelling cold and dampness in the body. It involves local suction on the skin through vacuum created by heating and subsequent cooling of the air in the cup. Because of its easy application and immediate effects, cupping therapy has been practiced in China since time immemorial and remains to this day as a form of traditional medicine for treating illnesses and enhancing health. With solid grounding in both theory and clinical practice, the author introduces the fundamental principles of cupping therapy and areas that require special attention, which are followed by techniques of cupping for targeted ailments. The book covers nine areas: internal medicine, surgery, ENT and ophthalmology, dermatology, andrology, gynecology, and pediatrics (with 73 common illnesses), as well as sub-health condition and health and complexion enhancement, with cupping options for various target skin areas. This book contains: A therapy for healing, enhancing health and improving quality of life through the natural way of traditional Chinese medicine. Techniques of cupping that can be quickly mastered to help you heal, with easy-to-follow illustrations. Tips from a medical professional on having a better diet and lifestyle to prevent illness and gain a healthy complexion.

Oxygen Transport to Tissue XXXVII - Clare E. Ebell - 2016-01-18
This book contains the refereed contributions from the 42nd annual meeting of ISOTT. The annual meetings of ISOTT bring together scientists from various fields (medicine, physiology, mathematics, biology, chemistry, physics, engineering, etc.) in a unique international forum. ISOTT conferences are a place where an atmosphere of interaction is created, where many questions are asked after each presentation and lively discussions occur at a high scientific level. This vivid interaction is the main motivation for members to participate and gain new ideas and knowledge in the broad field of oxygen transport to tissues. The papers in this volume summarize some of the outstanding contributions from the 42nd annual meeting, which included sessions on: cellular hypoxia and mitochondria; blood substitutes and oxygen therapeutics; oxygen transport in critical care medicine and disease; muscle oxygenation; multi modal imaging techniques; brain oxygenation and imaging; optical techniques for oxygen measurement; microcirculation; mathematical modelling of oxygen transport; and cancer metabolism.
