*10 PRINT CHR\$(205.5+RND(1)); : GOTO 10* Nick Montfort, Patsy Baudoin, John Bell, Ian Bogost, Jeremy Douglass, 2012-11-23 A single line of code offers a way to understand the cultural context of computing. This book takes a single line of code—the extremely concise BASIC program for the Commodore 64 inscribed in the title—and uses it as a lens through which to consider the phenomenon of creative computing and the way computer programs exist in culture. The authors of this collaboratively written book treat code not as merely functional but as a text—in the case of *10 PRINT*, a text that appeared in many different printed sources—that yields a story about its making, its purpose, its assumptions, and more. They consider randomness and regularity in computing and art, the maze in culture, the popular BASIC programming language, and the highly influential Commodore 64 computer.

**Making the Geologic Now** Elizabeth Ellsworth, Jamie Kruse, 2012-12-01 *Making the Geologic Now* announces shifts in cultural sensibilities and practices. It offers early sightings of an increasingly widespread turn toward the geologic as source of explanation, motivation, and inspiration for creative responses to conditions of the present moment. In the spirit of a broadside, this edited collection circulates images and short essays from over 40 artists, designers, architects, scholars, and journalists who are actively exploring and creatively responding to the geologic depth of now. Contributors' ideas and works are drawn from architecture, design, contemporary philosophy and art. They are offered as test sites for what might become thinkable or possible if humans were to collectively take up the geologic as our instructive co-designer—as a partner in designing thoughts, objects, systems, and experiences. A new cultural sensibility is emerging. As we struggle to understand and meet new material realities of earth and life on earth, it becomes increasingly obvious that the geologic is not just about rocks. We now cohabit with the geologic in unprecedented ways, in teeming assemblages of exchange and interaction among geologic materials and forces and the bio, cosmo, socio, political, legal, economic, strategic, and imaginary. As a reading and viewing experience, *Making the Geologic Now* is designed to move through culture, sounding an alert from the unfolding edge of the geologic turn that is now propagating through contemporary ideas and practices. Pre-Incident Indicators of Terrorist Incidents Brent L. Smith, 2011 This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Six Canonical Projects by Rem Koolhaas Ingrid Böck, 2015-05-01 Rem Koolhaas (born in 1944) has been part of the international architecture avant-garde since the nineteen-seventies. His numerous worldwide awards include the Pritzker Prize in 2000 for his lifetime achievement. This book interprets his many buildings and projects for the first time through his own comprehensive theoretical oeuvre, comprising polemics manifestos, books about cultural studies such as *Delirious New York*, and so-called “design patents”. Rem Koolhaas developed an evolutionary design method that linked theory and practice, whereby an idea is applied to several projects and combined with others in different ways, so that it is continuously evolving. The book not only combines this architectural knowledge with the intellectual history of the concepts, but also reinterprets the function of the authors or the architects and their originality.

A Prehistory of the Cloud Tung-Hui Hu, 2015-08-21 The militarized legacy of the digital cloud: how the cloud grew out of older network technologies and politics. We may imagine the digital cloud as placeless, mute, ethereal, and unmediated. Yet the reality of the cloud is embodied in thousands of massive data centers, any one of which can use as much electricity as a midsized town. Even all these data centers are only one small part of the cloud. Behind that cloud-shaped icon on our screens is a whole universe of technologies and cultural norms, all working to keep us from noticing their existence. In this book, Tung-Hui Hu examines the gap between the real and the virtual in our understanding of the cloud. Hu shows that the cloud

grew out of such older networks as railroad tracks, sewer lines, and television circuits. He describes key moments in the prehistory of the cloud, from the game “Spacewar” as exemplar of time-sharing computers to Cold War bunkers that were later reused as data centers. Countering the popular perception of a new “cloudlike” political power that is dispersed and immaterial, Hu argues that the cloud grafts digital technologies onto older ways of exerting power over a population. But because we invest the cloud with cultural fantasies about security and participation, we fail to recognize its militarized origins and ideology. Moving between the materiality of the technology itself and its cultural rhetoric, Hu's account offers a set of new tools for rethinking the contemporary digital environment.

**Heterotopia and the City** Michiel Dehaene, Lieven De Cauter, 2008-05-15 Heterotopia, literally meaning ‘other place’, is a rich concept in urban design that describes a space that is on the margins of ordered or civil society, and one that possesses multiple, fragmented or even incompatible meanings. The term has had an impact on architectural and urban theory since it was coined by Foucault in the late 1960s but it has remained a source of confusion and debate since. *Heterotopia and the City* seeks to clarify this concept and investigates the heterotopias which exist throughout our contemporary world: in museums, theme parks, malls, holiday resorts, gated communities, wellness hotels and festival markets. With theoretical contributions on the concept of heterotopia, including a new translation of Foucault’s influential 1967 text, *Of Other Space* and essays by well-known scholars, the book comprises a series of critical case studies, from Beaubourg to Bilbao, which probe a range of (post)urban transformations and which redirect the debate on the privatization of public space. Wastelands and terrains vagues are studied in detail in a section on urban activism and transgression and the reader gets a glimpse of the extremes of our dualized, postcivil condition through case studies on Jakarta, Dubai, and Kinshasa. *Heterotopia and the City* provides a collective effort to reposition heterotopia as a crucial concept for contemporary urban theory. The book will be of interest to all those wishing to understand the city in the emerging postcivil society and post-historical era. Planners, architects, cultural theorists, urbanists and academics will find this a valuable contribution to current critical argument.

**Buildings for Education** Stefano Della Torre, Massimiliano Bocciarelli, Laura Daglio, Raffaella Neri, 2019-01-01 This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community. Innovations in both design and construction processes are then analyzed, paying special attention to the Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage

and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

**Landscape as Infrastructure** Pierre Belanger, 2016-11-10 As ecology becomes the new engineering, the projection of landscape as infrastructure—the contemporary alignment of the disciplines of landscape architecture, civil engineering, and urban planning— has become pressing. Predominant challenges facing urban regions and territories today—including shifting climates, material flows, and population mobilities, are addressed and strategized here. Responding to the under-performance of master planning and over-exertion of technological systems at the end of twentieth century, this book argues for the strategic design of infrastructural ecologies, describing a synthetic landscape of living, biophysical systems that operate as urban infrastructures to shape and direct the future of urban economies and cultures into the 21st century. Pierre Bélanger is Associate Professor of Landscape Architecture and Co-Director of the Master in Design Studies Program at Harvard University’s Graduate School of Design. As part of the Department of Landscape Architecture and the Advanced Studies Program, Bélanger teaches and coordinates graduate courses on the convergence of ecology, infrastructure and urbanism in the interrelated fields of design, planning and engineering. Dr. Bélanger is author of the 35th edition of the Pamphlet Architecture Series from Princeton Architectural Press, GOING LIVE: from States to Systems (pa35.net), co-editor with Jennifer Sigler of the 39th issue of Harvard Design Magazine, Wet Matter, and co-author of the forthcoming volume ECOLOGIES OF POWER: Mapping Military Geographies & Logistical Landscapes of the U.S. Department of Defense. As a landscape architect and urbanist, he is the recipient of the 2008 Canada Prix de Rome in Architecture and the Curator for the Canada Pavilion and Canadian Exhibition, EXTRACTION, at the 2016 Venice Architecture Biennale (extraction.ca).

**Handbook of European Societies** Stefan Immerfall, 2009 European integration is one of the most ambitious and socially far-reaching developments in world politics and in world economics. Against growing opposition and despite increasing social heterogeneity, the European Union continues to expand and to acquire new competences. But to what extent is the self-proclaimed ever closer union among the peoples of Europe a social reality? In which ways is the political European project anchored in social developments? How does social change impinge upon political integration? Societal trends in multi-cultural, multi-ethnic, multi-lingual and socially diverse Europe have never been studied systematically. Handbook of European Societies: Social Transformations in the 21st Century sets to rectify this neglect of societal developments in Europe, providing a groundwork for the sociology of European integration. The book portrays social life and social relations in the enlarged Europe, and gives a perspective on the European Union as an evolving social entity.

Handbook of European Societies is a pioneering source book analyzing the current social patterns on the continent. It covers a representative selection of major topics of social concern and sociological relevance, such as Collective Action, Consumption, Identity, Power Structure, Sexuality, Stratification and Well-being. Each contribution probes key developments in a strictly comparative manner. The Handbook thus offers a detailed look into the intricacies of the national societies of Europe and into the prospect of an emerging European society. The Editors have enlisted leading researchers to synthesize existing knowledge and to make use of many different data sources in a straight-forward style. The contributions stay away from jargon, simple labeling and sweeping assertions. Instead, they provide solid and accessible information on a wide variety of social trends and processes within and across European societies

**Urban Interstices: The Aesthetics and the Politics of the In-between** Dr Andrea Mubi Brighenti, 2013-12-28

Bringing together a team of international scholars with an interest in urban transformations, spatial justice and territoriality, this volume questions how the interstice is related to the emerging processes of partitioning, enclave-making and zoning, showing how in-between spaces are intimately related to larger flows, networks, territories and boundaries. Illustrated with a range of case studies from places such as the US, Quebec, the UK, Italy, Gaza, Iraq, India, and South-east Asia, the volume analyses the place and function of interstitial locales in both a 'disciplined' urban space and a disordered space conceptualized through the notions of 'excess', 'danger' and 'threat'. Warning not to romanticize the interstice, the book invites us to study it as not simply a place but also a set of phenomena, events and social interactions. How are interstices perceived and represented? What is the politics of visibility that is applied to them? How to capture their peculiar rhythms, speeds and affects? On the one hand, interstices open up venues for informality, improvisation, challenge, and bricolage, playful as well as angry statements on the neoliberal city and enhanced urban inequalities. On the other hand, they also represent a crucial site of governance (even governance by withdrawal) and urban management, where an array of techniques ranging from military urbanism to new forms of value extraction are experimented. At the point of convergence of all these tensions, interstices appear as veritable sites of transformation, where social forces clash and mesh prefiguring our urban future. The book interrogates these territories, proposing new ways to explore the dynamics, events and visibilities that define them.

Modern Architecture in Africa Antoni S. Folkers, Belinda A. C. van Buiten, 2019-07-22 This book offers unique insights into modern African architecture, influenced by modern European architecture, and at the same time a natural successor to existing site-specific and traditional architecture. It brings together the worlds of traditional site-specific architecture with the Modernist Project in Africa, which to date have only been considered in isolation. The book covers the four architectural disciplines: urban planning, building technology, building physics, and conservation. It includes an introduction with a historical outline and an analysis and comparison of a number of projects in various countries in Africa. On the basis of

examples drawn from practice, the author documents and describes the hybrid architectural forms that have emerged from the confrontation and fusion with (pre)modern Western architecture and urban planning, and in so doing he also narrates the history of African architecture.

**BIM Design** Richard Garber,2014-08-11 Building information modelling (BIM) is revolutionising building design and construction. For architects, BIM has the potential to optimise their creativity while reducing risk in the design and construction process, thus giving them a more significant role in the building process. This book demonstrates how innovative firms are using BIM technologies to move design away from the utilitarian problems of construction, engaging them in a stunning new future in the built environment. Whereas recent books about BIM have tended to favour case-study analyses or instruction on the use of specific software, BIM Design highlights how day-to-day design operations are shaped by the increasingly generative and collaborative aspects of these new tools. BIM strategies are described as operations that can enhance design rather than simply make it more efficient. Thus this book focuses on the specific creative uses of information modelling at the operational level, including the creative development of parametric geometries and generative

design, the evaluation of environmental performance and the simulation and scheduling of construction/fabrication operations. This book also engages BIM's pragmatic efficiencies such as the conflict checking of building systems and the creation of bills of quantities for costing; and in so doing it demonstrates how BIM can make such activities collaborative. Throughout, projects are used to illustrate the creative application of BIM at a variety of scales. These buildings showcase work by firms executing projects all over the world: SHoP Architects and Construction (New York), Morphosis (Los Angeles), Populous (London), GRO Architects (New York), Reiser + Umemoto (New York), Gensler (Shanghai) and UNStudio (Amsterdam).

Hidden Geographies Marko Krevs, 2021-10-21 This book defines and discusses the term "hidden geographies" in two ways: systematically and by presenting a variety of examples of the research fields and topics concerning hidden geographies, with the aim of stimulating further basic and applied research in this area. While the term is quite rarely used in the scientific literature (more often as a figure of speech than to illustrate or problematize its deeper meaning), we argue that hidden geographies are everywhere and many of them have significant impacts on (other) natural and social phenomena and processes, subsequently triggering changes, for example in landscape, economy, culture, health or quality of life. The introductory section of the book conceptualises hidden geographies and discusses cognitive geography, symbolization of space, and the hidden geographies in mystical literature. Case studies of hidden environmental geographies address soils, air pollution, coastal pollution and the allocation of an astronomical tourism site. Revealing hidden historical and sacred places is illustrated through examples of the visualisation of the subterranean mining landscape, the analysis of the historical road network and trade, border stones and historical spatial boundaries, and the monastic Carthusian space. Hidden urban geographies are discussed in terms of the urban development of an entire city, presenting the role of geography in rescuing architecture, revealing illegal urbanisation, and the quality of habitation in Roma neighbourhoods. Case studies of hidden population geographies shed light on the ageing of rural populations and the impact of spatial-demographic disparities on fertility variations. Discussions of hidden social and economic geographies problematize recent social changes and conflicts in a country, present the implementation of the fourth industrial revolution and borders as hidden obstacles in the organisation of public transport. Hidden geographies are explicitly linked to perceptions and explanations in case studies that address local responses to perceived marginalisation in a city, the solo women travellers' perceived risk and safety, and hidden geographical contexts of visible post-war landscapes. The book brings such a diversity of views, ideas and examples related to hidden geographies that can serve both to deepen their understanding and their various impacts on our lives and environment, and to attract further cross-disciplinary interest in considering hidden geographies - in research and in our every-day lives.

The Rule of Logistics Jesse LeCavalier, 2016-08-26 Every time you wheel a shopping cart through one of Walmart's more

than 10,000 stores worldwide, or swipe your credit card or purchase something online, you enter a mind-boggling logistical regime. Even if you've never shopped at Walmart, its logistics have probably affected your life. *The Rule of Logistics* makes sense of its spatial and architectural ramifications by analyzing the stores, distribution centers, databases, and inventory practices of the world's largest corporation. *The Rule of Logistics* tells the story of Walmart's buildings in the context of the corporation's entire operation, itself characterized by an obsession with logistics. Beginning with the company's founding in 1962, Jesse LeCavalier reveals how logistics—as a branch of knowledge, an area of work, and a collection of processes—takes shape and changes our built environment. Weaving together archival material with original drawings, LeCavalier shows how a diverse array of ideas, people, and things—military theory and chewing gum, Howard Dean and satellite networks, Hudson River School painters and real estate software, to name a few—are all connected through Walmart's logistical operations and in turn are transforming how its buildings are conceptualized, located, built, and inhabited. A major new contribution to architectural history and theory, *The Rule of Logistics* helps us understand how retailing today is changing our bodies, brains, buildings, and cities and predicts what future forms architecture might take when shaped by systems that exceed its current capacities.
